Best practices across Dutch military education

Erica Bathoorn & Anna Hermans-Netherlands,
teachers Dutch language skills

DOSCO

8 november 2026

Overview

In our presentation, we offer a glimpse into educational practice in the Netherlands. We highlight three best practices:

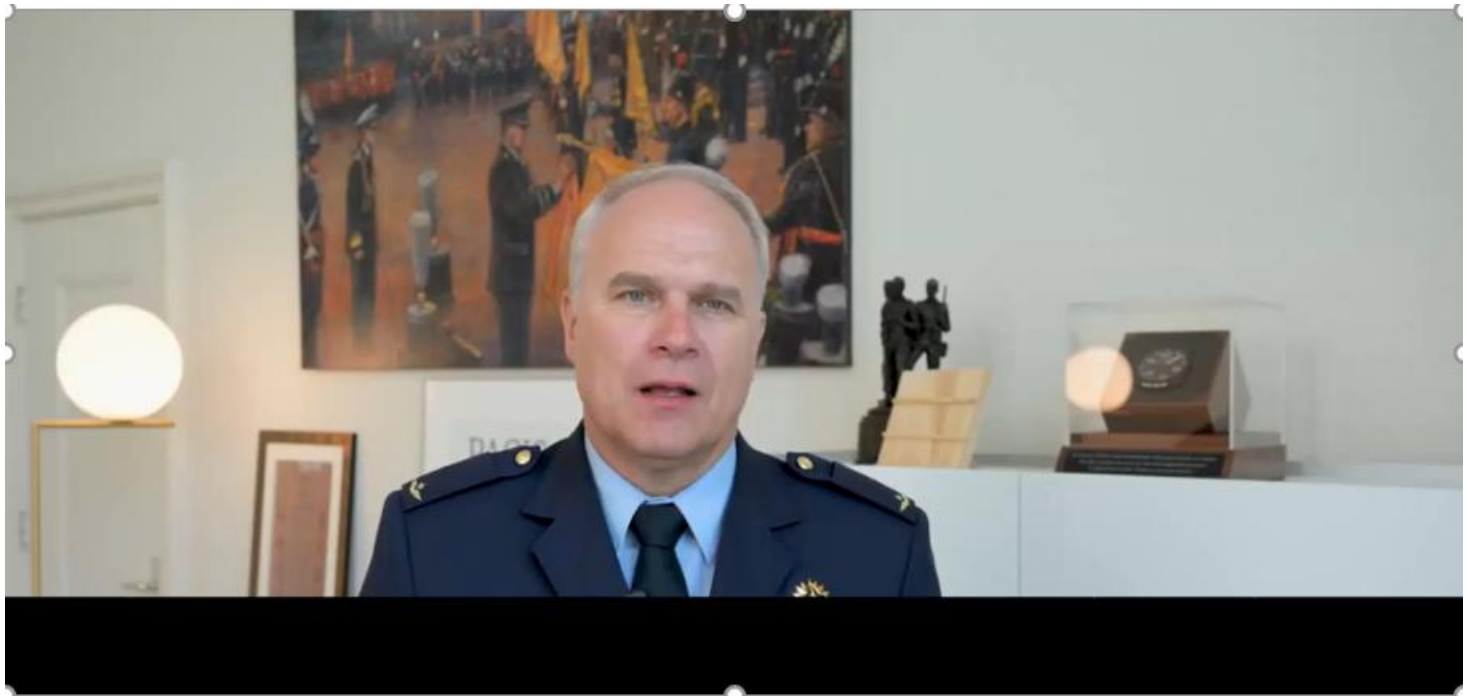
1. Real cases, real generals.
2. Vibe coding.
3. Comparative approaches to the assessment of writing.

1. Real cases, real generals

Professional education
Real-life cases
Articulated by politicians, professors from our military academy or high-ranking officers

They almost never say no
Sometimes we give feedback on the results

An example, our Chief of Defense: general Eichelsheim



2. Vibe coding

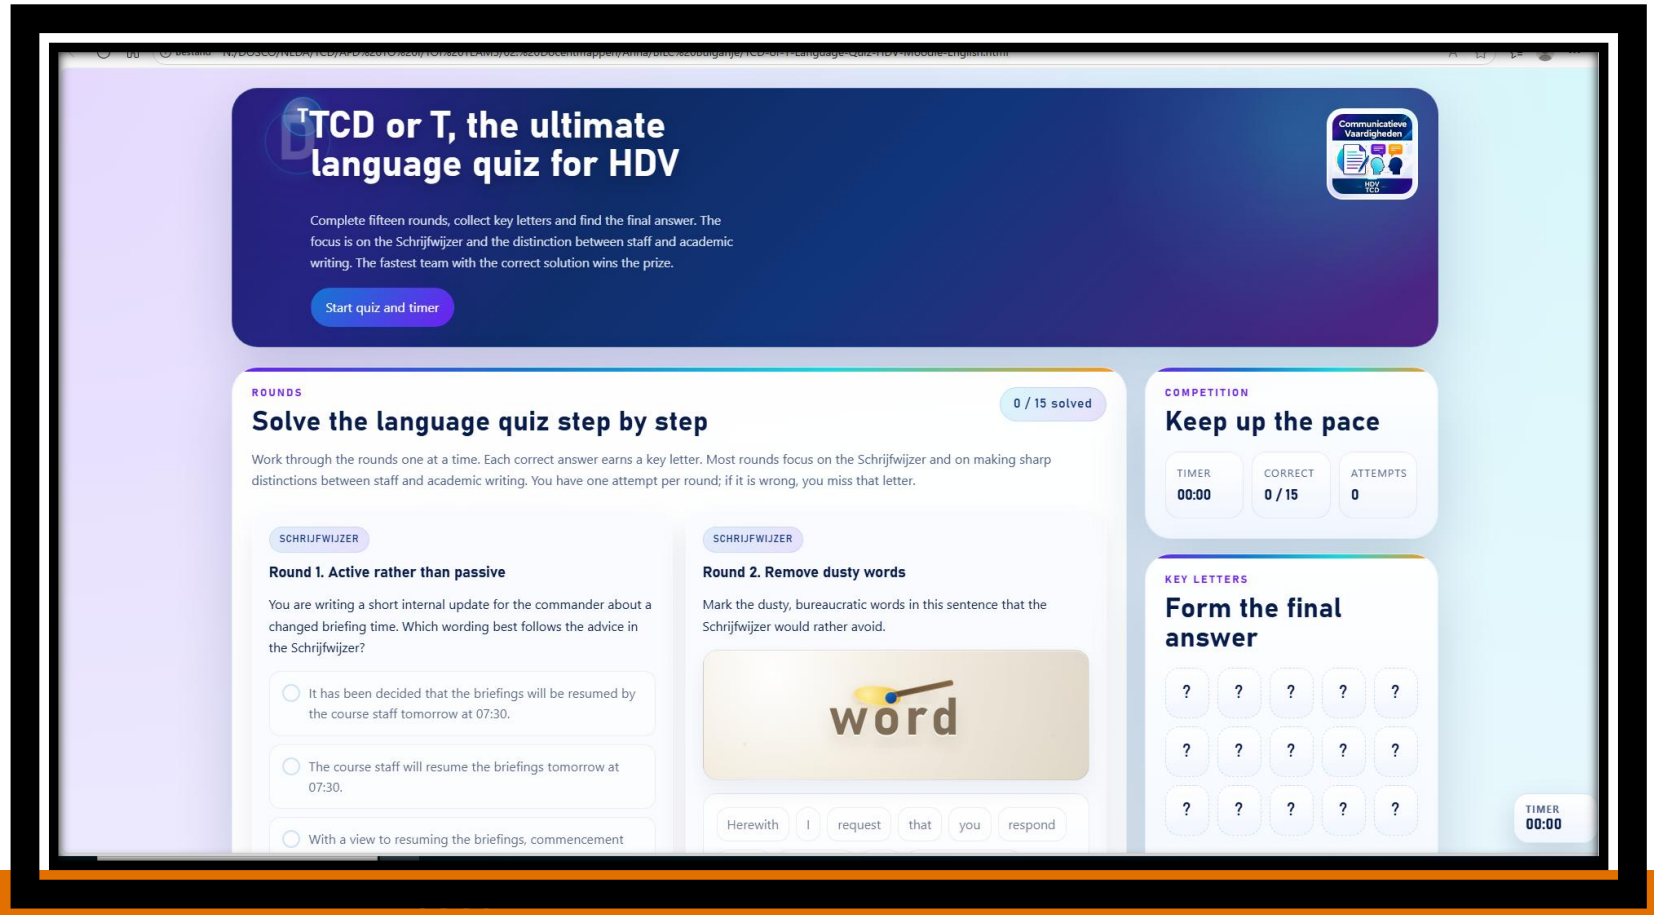
“a software development approach where people use plain language prompts to make artificial intelligence generate and manage computer code instead of writing it manually”

We use it to make excercises:

- Published in HTML on Moodle
- Students work independently
- Tailored to a defense context

An example

Language quiz at the end of a course.
Competitive element
timer



3. Comparative approach of text assessments

- Students conduct peer review using a software program.
